

Synchronisation Expertise from Chronos

Chronos Technology has been actively engaged in synchronisation and timing for over 30 years and our technical team has wide experience and knowledge in the synchronisation of telecom networks and equipment.

Whether you are developing new equipment or evaluating/designing new network implementations, the Chronos technical team is at hand to support you with our expertise.

We have a proven track record of carrying out sync audits on telecom networks worldwide measuring a snapshot of your current network performance. Our synchronisation MasterClass is also available to educate your engineers in the art of synchronisation.

Chronos has a significant portfolio of test equipment drawn from a number of leading test equipment manufacturers and can measure any number of test points simultaneously. We can not only measure the performance of equipment and networks, but can also generate stress-test scenarios including traffic and jitter/wander enabling us to measure the tolerance of equipment and networks.

Testing can be carried out in our test lab, at a customer test lab or in the field. All testing and monitoring is backed by our in depth knowledge.

We validate and enhance your design:

- Testing prototype equipment
- Validating standards compliance
- Monitoring field trial performance
- Design your synchronisation network
- Monitoring your networks sync performance
